

Django developer Intern Assignment
Thinsil Tech. Pvt. Ltd.

Create a basic e-commerce website using Django in the backend.

Feature it must have:

1. User registration and login page.
2. A home page where the user can view all the products using cards from the database.
3. A product overview page, details will be fetched from a database.
4. Add to cart page.

Practices:

1. Give proper comments.
2. Create a requirements.txt file, creds file.
3. And follow the best coding practices.
4. Designing a good frontend page will be an added advantage but is not necessary.

Note: Don't take help from any AI tool, this is to test your skills otherwise we can get an AI in-place of you to work for us.

After the completion of the project, please create a video of the working website and upload it to google drive and also upload the code to your github and share both the link with us through mail.

Mail format must be:

To: debendu.makur@thinsil.com
